

Facility, Infrastructure & Range Management

Facility and Infrastructure Management

VT Group is engaged in a multitude of facility, infrastructure and range management and planning activities for the U.S. armed forces and other federal agencies. Our goal is to ensure the functionality, readiness and cost-effective operation and maintenance of all permanent and semi-permanent facilities.

Facility, infrastructure and range management can encompass a variety of factors, and we approach each as serious as the next. As the prime service provider or range operations and maintenance (O&M) support at NASA's Wallops Flight Facility in Virginia, we provide project management for launch pads, facilities and supporting infrastructure among other services. At the U.S. Coast Guard base in Kodiak, AK, we provide similar services for airspace management and ground systems and facilities support. For the UK's Ministry of Defence, we provide air weapons range services at RAF Tain, Cape Wrath and other warfare centers. Across all efforts, we collaborate with our customers to determine impacts on:

- Lifecycle Costs
- Funding Requirements
- Facility Location and Improvements
- Space Requirements
- Environmental Impacts

- Occupational Safety and Health Standards
- Security Requirements

We manage and plan utility infrastructure requirements for fixed and mobile facilities with an emphasis on limiting requirements for scarce or unique resources. We have the capability to operate the entire utilities infrastructure, including:

- Electricity, Electric Generation and Distribution
- Natural Gas
- Water and Water Distribution
- Sewage and Water Treatment Systems
- Solid waste
- Pumping Systems
- Heating, ventilation and Air Conditioning Systems

We also provide top to bottom, indoor and outdoor operations and maintenance for critical facilities.

Our services cover:

- Emergency or Command Operations Centers
- Fuels
- Ports
- Aerodrome
- Ordnance
- Firefighting
- Security and Protective Forces
- Warehouses

No matter what the challenge, we are ready for it. We approach every task with a sense of pride and pay special attention to the details outsiders may overlook, but as insiders we know are the foundation for success.

Range Management

Training is the key to preparing military and civilian forces for optimal mission performance, and during tough economic times, the training that may have taken place at a remote location is being increasingly moved on-site. We provide range operations and maintenance (O&M) support including:

- Flight-line Operations
- Ground Support
- Communications Systems
- Launch Pads and Associated Facilities

Examples

- We provide services on military sites around the world, including airfields, army camps and naval bases. Activities include security, power generation and airfield operation as well as more traditional facilities management.
- We are responsible for Information and Communications Technology (ICT) provision in schools, colleges and other organizations. We recently installed video conference facilities for the U.S. Congress.
- We maintain facilities for space agencies, including NASA's flight facility at Wallops Island, Va., and the European Space Agency's satellite ground station in French Guiana.
